

CSULB  
Lab While Loop

Objectives:

- Understanding while loop

In groups of 2 students of your choice do the following:

- A- Write a Python **while loop** that will output the **even numbers** between 80 and 100 - included-.
  - Paste your code and a sample output in a word document.
- B- Modify the previous code to output the even numbers in **descending order**.
  - Paste the new code with a sample output in the same document.
- C- Modify your code again, to ask the user to enter **two positive values**: upper\_limit and lower\_limit  
For each value, make **sure it is positive**.
  - Paste the new code with multiple sample outputs showing the validation, in the same document.

Upload your document with answers for sections A, B, and C as a pdf
